# UNDERGRADUATE MEDICAL EDUCATION PROGRAM

## YEDİTEPE UNIVERSITY FACULTY OF MEDICINE

### AIM OF MEDICAL EDUCATION PROGRAM

\*“Consensus Commission Report” based on draft compiled at “Workshop for Revision of Aim and Outcomes of Medical Education Program at Yeditepe University Faculty of Medicine”

\*\*© 2011, Yeditepe University Faculty of Medicine

#### AIM

The aim of medical education program **is to graduate physicians** who

- 1.0. **are aware of** the local and global health issues
- 2.0. **have acquired competence** in knowledge, skills and attitudes to manage and provide primary health care service
- 3.0. **know, apply** and **care** for ethical principles of the medical profession
- 4.0. **keep up with** current knowledge at national and international level
- 5.0. **are capable of** systematical thinking
- 6.0. **are** investigative and questioning
- 7.0. continually **renovate** and **improve** themselves
- 8.0. **are capable of** teamwork
- 9.0. **use** technology competently in medicine and related areas
- 10.0. **have** effective communication skills
- 11.0. **have** community leadership qualifications

COMPETENCY AREA-1 / Professional Practices
COMPETENCY 1.1. Health Service Provider
<b>Competence 1.1.1.</b> Integrates knowledge, skills, and attitudes acquired from basic and clinical medical sciences, behavioral sciences, and social sciences to provide health services.
<b>Competence 1.1.2.</b> Demonstrates a biopsychosocial approach that considers the individual's sociodemographic and sociocultural background without discrimination based on language, religion, race, or gender in patient management.
<b>Competence 1.1.3.</b> Prioritizes the protection and improvement of individuals' and community's health in the delivery of healthcare services.
<b>Competence 1.1.4.</b> Performs the necessary actions in the direction of maintaining and improving the state of health as considering the individual, social, social and environmental factors affecting health.
<b>Competence 1.1.5.</b> Provides health education to healthy/ill individuals and their families, as well as to other healthcare professionals, by recognizing the characteristics, needs, and expectations of the target audience.
<b>Competence 1.1.6.</b> Demonstrates a safe, rational, and effective approach in the processes of protection, diagnosis, treatment, follow-up, and rehabilitation in health service delivery.
<b>Competence 1.1.7.</b> Performs interventional and/or non-interventional procedures safely and effectively for the patient in the processes of diagnosis, treatment, follow-up, and rehabilitation.
<b>Competence 1.1.8.</b> Provides healthcare services considering patient and employee health and safety.

<b>Competence 1.1.9.</b> Considers changes related to the physical and socio-economic environment at both regional and global scales that affect health, as well as changes in the individual characteristics and behaviors of those who seek healthcare services.
<b>COMPETENCY AREA-2 / Professional Values and Approaches</b>
<b>COMPETENCY 2.1. Adopting Professional Ethics and Principles</b>
<b>Competence 2.1.1.</b> Considers good medical practices while performing the profession.
<b>Competence 2.1.2.</b> Fulfills duties and obligations within the framework of ethical principles, rights, and legal responsibilities required by the profession.
<b>Competence 2.1.3.</b> Demonstrates determined behavior in providing high-quality healthcare while considering the patient's integrity.
<b>Competence 2.1.4.</b> Evaluates own performance in professional practices by considering own emotions and cognitive characteristics.
<b>COMPETENCY 2.2. Health Advocate</b>
<b>Competence 2.2.1.</b> Advocates for the improvement of healthcare service delivery by considering the concepts of social accountability and social responsibility in the protection and enhancement of community health.
<b>Competence 2.2.2.</b> Plans and implements service delivery, education, and counseling processes related to individual and community health, in collaboration with all stakeholders, for the protection and improvement of health.
<b>Competence 2.2.3.</b> Evaluates the impact of health policies and practices on individual and community health indicators and advocates for the improvement of healthcare quality.
<b>Competence 2.2.4.</b> Gives importance to protecting and improving own physical, mental, and social health and takes necessary actions for it.
<b>COMPETENCY 2.3. Leader-Manager</b>
<b>Competence 2.3.1.</b> Demonstrates exemplary behavior and leadership within the healthcare team during service delivery.
<b>Competence 2.3.2.</b> Utilizes resources in a cost-effective, socially beneficial, and compliant manner with regulations in the planning, implementation, and evaluation processes of healthcare services as the manager in the healthcare institution.
<b>COMPETENCY 2.4. Team Member</b>
<b>Competence 2.4.1.</b> Communicates effectively within the healthcare team and takes on different team roles as necessary.
<b>Competence 2.4.2.</b> Displays appropriate behaviors while being aware of the duties and responsibilities of healthcare workers within the healthcare team.
<b>Competence 2.4.3.</b> Works collaboratively and effectively with colleagues and other professional groups in professional practice.

<b>COMPETENCY 2.5. Communicator</b>
<b>Competence 2.5.1.</b> Communicates effectively with patients, their families, healthcare professionals, and other occupational groups, institutions and organizations.
<b>Competence 2.5.2.</b> Communicates effectively with individuals and groups who require a special approach and have different sociocultural characteristics.
<b>Competence 2.5.3.</b> Demonstrates a patient-centered approach that involves the patient in decision-making mechanisms during the diagnosis, treatment, follow-up, and rehabilitation processes.
<b>COMPETENCY AREA-3 / Professional and Personal Development</b>
<b>COMPETENCY 3.1. Scientific and Analytical Approach</b>
<b>Competence 3.1.1.</b> Plans and implements scientific research, as necessary, for the population it serves, and utilizes the results obtained, as well as those from other research, for the benefit of the community.
<b>Competence 3.1.2.</b> Accesses and critically evaluates current literature related to their profession.
<b>Competence 3.1.3.</b> Applies evidence-based medicine principles in the clinical decision-making process.
<b>Competence 3.1.4.</b> Uses information technologies to enhance the effectiveness of healthcare, research, and education activities.
<b>COMPETENCY 3.2. Lifelong Learner</b>
<b>Competence 3.2.1.</b> Manages effectively individual study processes and career development.
<b>Competence 3.2.2.</b> Demonstrates skills in acquiring, evaluating, integrating new information with existing knowledge, applying to professional situations, and adapting to changing conditions throughout professional career.
<b>Competence 3.2.3.</b> Selects the right learning resources to improve the quality of health care and organizes the learning process.

## **UNIVERSITY FACULTY OF MEDICINE PROGRAM OUTCOMES OF MEDICAL EDUCATION**

YUTF - Undergraduate Medical Education Program was designed to provide our graduates with the competencies that are specified in the National Competencies List of medical graduates (UYYB).

UYYB is a national document that indicates the expected/required competencies of the students who are at the stage of graduating from Medical Schools in Turkey.

You can find UYYB from the link: [https://www.yok.gov.tr/Documents/Kurumsal/egitim\\_ogretim\\_dairesi/Ulusal-cekirdek-egitimi-programlari/mezuniyet-oncesi-tip-egitimi-cekirdek-egitimi-programi.pdf](https://www.yok.gov.tr/Documents/Kurumsal/egitim_ogretim_dairesi/Ulusal-cekirdek-egitimi-programlari/mezuniyet-oncesi-tip-egitimi-cekirdek-egitimi-programi.pdf)

## **INSTRUCTIONAL DESIGN of PRECLINICAL YEARS**

In Phase I, II and III, the formation of committees is based on a thematic structure. This structure corresponds to organizational levels of the human body such as macromolecule, organelle, cell, tissue, organ systems and finally introduction to pathogenesis.

- Phase I: Normal structure and function of the human body at molecular, cellular, tissue and organ level.
- Phase II: Normal structure and function of human body at system and multi-system level, and introduction to pathogenesis.
- Phase III: Physiopathological and pathological processes in the human body.

Beside this thematic structure, there is a continuous clinical skills education in Phase I, II and III, as “Introduction to Clinical Practice -I, -II and -III” courses.

Therefore, the core medical courses are;

- Phase I: MED 104 Basic Medical Sciences I, MED 102 Introduction to Clinical Practice I, MED 103 Anatomical Drawing,
- Phase II: MED 203 Basic Medical Sciences II, MED 202 Introduction to Clinical Practice II,
- Phase III: MED 302 Introduction to Clinical Sciences, MED 303 Introduction to Clinical Practice III.

The learning objectives of each phase include learning objectives of core committees. The learning objectives of committees include learning objectives of core topics' components for the committee.

The curriculum applies to 2023-2024 educational term. The duration of educational term for each year is shown in the table as total number of weeks. ECTS credits are the university credits of the courses in Yeditepe University Faculty of Medicine Undergraduate Medical Education Program. 1 ECTS=30 hours of workload including independent study hours per average student. GPA and cGPA calculations are based on ECTS credits.

<sup>1</sup>Free Elective Courses. Only one of the free elective courses provided by Faculty of Medicine can be selected in an educational year. Free elective courses provided by Faculty of Medicine in the first three years: MED 611 Medical Anthropology, MED 612 Creative Drama I, MED 613 Medical Humanities, MED 614 Personal Trademark Development, MED 615 Innovation Management, MED 616 Medical Management and New Services Design Skills, MED 619 Entrepreneurship and Storytelling Techniques for Business Purposes, MED 620 Art, Culture and Life Styles, MED 621 Epidemiological Research and Evidence Based Medicine, MED 622 Applications of Economics in Health Care, MED 623 Visual Presentation in Medicine, MED 627 Presentation of Medicine on Media, MED 628 Healthy Living : The Milestones of the Life for Performance Management, MED 629 Music and Medicine, MED 630 Health Law, MED 631 Creative Drama II, MED 632 Music Appreciation, MED 633 Communication with Hearing Impaired Patients in Turkish Sign Language, MED 634 Case Based Forensic Science, MED 635 Advanced Level Communication with Hearing Impaired Patients in Turkish Sign Language, MED 636 Art Project, MED 637 Artistic Photography and Composition.

<sup>2</sup>Common Courses. These courses are obligatory in all programs of the university. The university credit values of the common courses are as stated by the University Senate. Except for HUM 103, these courses are not to be included in the GPA and cGPA calculations. Courses on Turkish Language and Culture for Foreigners (AFYA). Based on the result of Turkish Language Proficiency Exam, instead of TKL 201 (FS) and TKL 202 (SS) courses, international students will be requested to take the required ones from the AFYA 101 (FS), AFYA 102 (SS), AFYA 201 (FS) and AFYA 202 (SS) courses, designed for them. Each of these courses have credits as Y=3 and E=5. These courses are not to be included in the GPA and cGPA calculations.

## **DESCRIPTION and CONTENT of PHASE I**

Normal Physiology, Basic Sciences and Medical Terms.

Introduction to Basic Sciences, Cell, Tissue I, Tissue II, Energy and Metabolism.

Organic Chemistry, Biophysics, Medical Biology, Medical History and Ethics, Anatomy, Anatomical Drawing, Physiology, Histology & Embryology, Medical Biochemistry, Medical Microbiology, Immunology, Family Medicine, Medical Education, Biostatistics, Humanities, Behavioral Sciences, Turkish Language and Literature, Principles of Atatürk and Modern History of Turkey.

## AIM and LEARNING OBJECTIVES of PHASE I

### AIM

**To convey** basic knowledge on medical history, organic chemistry, biology, biophysics, biochemistry, biostatistics, anatomy, physiology, embryology, histology, microbiology, immunology, behavioral sciences, civilization history and medical ethics.

**To convey** complementary educational experiences by improving biopsychosocial approach on medical practice.

**To prepare** students to clinical practice.

### LEARNING OBJECTIVES

*At the end of this phase, students should be able to:*

#### **KNOWLEDGE**

- 1.0. explain information about medical history, anatomy, physiology, embryology, histology, organic chemistry, biology, biophysics, biochemistry, biostatistics, microbiology, immunology, behavioral sciences, civilization history, and medical ethics, and elective courses.
- 2.0. for biophysics;
  - 2.1. explain basic terms and concepts.
  - 2.2. explain its essential application areas in medicine.
- 3.0. explain the structure and function of the cell.
- 4.0. describe the stages of early embryonic development.
- 5.0. define four basic tissue types with cells and extracellular matrix.
- 6.0. define transport mechanism of biological membranes and its correlation with ATP usage
- 7.0. list the enzymes in blood coagulation
- 8.0. for enzymes;
  - 8.1. list basic properties and classes of enzymes,
  - 8.2. describe regulatory functions of enzymes,
  - 8.3. define the functions of enzymes in
- 9.0. define the link between the structure and function of tissues.
- 10.0. define muscular, vascular, and nervous systems.
- 11.0. list basic properties and classes of microorganisms.
- 12.0. describe basic terms and concepts about first aid.
- 13.0. describe basic terms and concepts of communication skills.
- 14.0. describe basic terms and concepts about epidemiology.
- 15.0. list fundamental steps of a research study.
- 16.0. describe basic terms of concepts of biostatistics.
- 17.0. explain case scenario related basic medical science topics in a clinical context.
- 18.0. define basic elements of immune response
- 19.0. describe scientific study design and types of scientific research

#### **SKILLS**

- 1.0. apply first aid skills to anatomic models.
- 2.0. use communication skills in patient-doctor interviews in simulated settings.
- 3.0. Search scientific literature
- 4.0. apply basic laboratory techniques and use equipment.
- 5.0. use biopsychosocial approach in medical practice.
- 6.0. display (demonstrate) scientific reasoning, information literacy, and skills of self-directed, life-long learning.
- 7.0. write a scientific article review

#### **ATTITUDES**

- 1.0 values teamwork, interpersonal skills, and significance of psychosocial issues

## AIM and LEARNING OBJECTIVES of BASIC MEDICAL SCIENCES I (MED 104)

### AIM

**To convey** basic knowledge on medical history, organic chemistry, biology, biophysics, biochemistry, biostatistics, anatomy, physiology, embryology, histology, microbiology, immunology, behavioral sciences, civilization history and medical ethics.

### LEARNING OBJECTIVES

*At the end of this phase, students should be able to:*

#### **KNOWLEDGE**

- 1.0. explain information about medical history, anatomy, physiology, embryology, histology, organic chemistry, biophysics, biochemistry, microbiology, behavioral sciences, civilization history and medical ethics
- 2.0. for biophysics
  - 2.1. explain basic terms and concepts.
  - 2.2. explain its essential application areas in medicine.
- 3.0. explain the structure and function of the cell.
- 4.0. describe the stages of early embryonic development
- 5.0. define four basic tissue types with cells and extracellular matrix.
- 6.0. describe the ATP production by substrate level phosphorylation and oxidative phosphorylation
- 7.0. for carbohydrate metabolism;
  - 7.1. define the digestion and absorption of carbohydrates
  - 7.2. explain glucose and glycogen metabolism, apply blood.
- 8.0. define the link between the structure and function of tissues.
- 9.0. define muscular, vascular and nervous systems.
- 10.0. list basic properties and classes of microorganisms.
- 11.0. describe basic terms and concepts about epidemiology.
- 12.0. list fundamental steps of a research study.
- 13.0. describe basic terms of concepts of biostatistics.
- 14.0. explain case scenario related basic medical science topics in a clinical context.
- 15.0. define basic elements of immune response
- 16.0. describe scientific study design and types of scientific research
- 17.0. list the proper manner of action as a responsible physician when faced with legal risks

#### **SKILLS**

- 1.0. apply basic laboratory techniques and use equipment.
- 2.0. present research data with tables, graphs and statistics.
- 3.0. use biopsychosocial approach in medical practice.
- 4.0. display (demonstrate) scientific reasoning, information literacy and skills of self-directed, life-long learning.
- 5.0. search scientific literature
- 6.0. write a scientific article review

#### **ATTITUDES**

- 1.0. value teamwork, interpersonal skills, and significance of psychosocial issues

## **DESCRIPTION of INTRODUCTION to CLINICAL PRACTICE I, II and III (ICP-I,-II,-III)**

### **(MED 102, MED 202, MED 303)**

#### **AIM of ICP PROGRAM**

The aim of Introduction to Clinical Practice Program is to equip the students with basic medical skills and attitudes, in areas such as history taking regarding to systems and in general, physical and mental examination in simulated environments in pre-clinical period and to give the students opportunity to develop skills by applying non –invasive or invasive procedures on the mannequins before encountering with real patients.

#### **Description**

ICP is a three year longitudinal course that aims to introduce students to the concepts and main elements of medical practice. It will also be an introduction to the medical profession as a whole and will provide a foundation for clinical practice. The course provides knowledge, cognitive and motor skills and experience in fundamental processes and aspects of medical practice. It involves the application of scientific theory, quality assurance and evidence-based best practice protocols.

#### **Credit Facility**

This course has 5 ECTS credits for each of the first three years and all of the students are required to pass this course in order to pass the year.

#### **Content of the ICP I-II-III**

First year medical students gain knowledge on First Aid approaches, Basic Knowledge on Infection Control and Standard Precautions, develop skills in Basic Life Support, Patient/Casualty Transportation and Bandaging Techniques regarding to First Aid and handwashing, wearing sterile gloves, wearing masks, assessing vital signs. They also acquire basic knowledge on communication and experience patient-doctor encounter with simulated patients (SP's)\*.

The second years ICP Program consist of modules like nasogastric intubation; bladder catheterization; intramuscular, subcutaneous, intradermal and intravenous injections; intravenous catheterization as well as intraarterial blood sampling.

In the third year medical students practice with SP's clinical skills like history taking and physical examination focused on body systems and in general and also mental examination. They also gain clinical skills such as suturing techniques and Advanced Cardiac Life Support.

#### **Clinical Skills Laboratory**

The Clinical Skills Laboratory is designed for teaching and assessing students at undergraduate level (during the preclinical period from first-year to third year). The lab provides learners with the ideal setting to practice the clinical skills of history taking, physical examination, communication, and gives opportunities to practice invasive and non invasive procedural skills on mannequins.

Each OSCE room is equipped with video cameras and microphones to record the encounter. An observation area at the center of the lab allows faculty and students to observe the encounters live or view digital recordings for subsequent analysis.

#### **\*Simulated Patients (SPs)**

The simulated patient encounters facilitate transfer of the gained theoretical knowledge to practice in simulated environments. SPs are usually, but not necessarily, lay people who are trained to portray a patient with a specific condition in a realistic way, sometimes in a standardized way (where they give a consistent presentation which does not vary from student to student). SPs are used for teaching and assessment of consultation and clinical/physical examination skills, in simulated teaching environments or in situ. (Cleland JA, Abe K, Rethans JJ. *The use of simulated patients in medical education: AMEE Guide No 42. Med Teach. 2009 Jun;31(6):477-86. doi: 10.1080/01421590903002821. PMID: 19811162.*)

**Assessment**

The Assessment procedure of ICP is given in the Assessment Table in this booklet.

**Rules for Attendance of the Students**

Students are grouped into 4 or 5 and group lists are announced to the class and also displayed in the ICP Lab announcement board at the beginning of the year. Any changes to practical groups on a week by week basis, will only be considered in exceptional situations such as a medical one. Any changes must be requested by a petition along with relevant documentation to the deanary. Any change in sessions will only be accepted interchangeably with another student in another group based on availability of work spaces and course coordinator's discretion (based on evidence provided).

Students are required to follow the rules of professional ethics in the laboratory at any time.

**Program Evaluation**

Each Semester students are required to fill out a feedback form according the ICP Program. When an OSCE is conducted both students and faculty members complete a written evaluation of the event for the improvement of the course and OSCE.

## **AIM and LEARNING OBJECTIVES of INTRODUCTION to CLINICAL PRACTICE I (ICP-I)**

### **(MED 102)**

#### **AIM**

The aim of Introduction to Clinical Practice-I is to equip first year medical students with basic knowledge and skills on Infection Control and Standard Precautions including hand washing, wearing sterile gloves and masks, measurement skills for basic vital signs and First Aid approaches and convey basic knowledge on communication and provide them the opportunity to experience patient-doctor encounters with simulated patients.

#### **LEARNING OBJECTIVES**

*At the end of this phase, student should be able to:*

#### **KNOWLEDGE**

- |   |
|---|
| <ul style="list-style-type: none"><li>1.0 describe the techniques of hand washing, wearing sterile gloves and masks in accordance with the skill procedure</li><li>2.0 describe modes of transmission and infection control measures</li><li>3.0 list Standard Precautions</li><li>4.0 describe basic terms and concepts of communication skills</li><li>5.0 describe basic terms and concepts about first aid</li><li>6.0 define vital signs</li><li>7.0 describe measurement of blood pressure with sphygmomanometer in adults in accordance with the skill procedure</li><li>8.0 recall the normal ranges of vital signs</li><li>9.0 describe the steps of measurement techniques of vital signs</li></ul> |
|---|

#### **SKILLS**

- |   |
|---|
| <ul style="list-style-type: none"><li>1.0. apply hand washing and wearing sterile gloves and masks skills in accordance with the skill procedure</li><li>2.0. use communication skills in patient-doctor interviews</li><li>3.0. apply first aid skills on mannequins</li><li>4.0. measure blood pressure by using adult sphygmomanometer in accordance with the skill procedure</li><li>5.0. measure body temperature in accordance with the skill procedure</li><li>6.0. count pulse rate in accordance with the skill procedure</li><li>7.0. count respiratory rate in accordance with the skill procedure</li></ul> |
|---|

#### **ATTITUDE**

- 1.0. values the importance of informed consent
- 2.0. pays attention to patient privacy
- 3.0. values the importance of not exceeding the limits of his/her own competency level
- 4.0. pays attention to follow laboratory rules

## **AIM and LEARNING OBJECTIVES of SCIENTIFIC RESEARCH and PROJECT I**

### **AIM**

The aim of the Scientific Research And Project – I (SRP) is to equip first year medical students to convey basic knowledge on scientific research and scientific methodology, to equip them with skills of searching scientific literature, to convey scientific study design and basic knowledge of reading and presenting a scientific research article.

### **LEARNING OBJECTIVES**

*At the end of this phase, student should be able to:*

#### **KNOWLEDGE**

- 1.0. explain basics of scientific research and scientific methodology
- 2.0. explain characteristics of scientific research
- 3.0. describe process of scientific research and scientific study design
- 4.0. explain the search construction, boolean operators and PubMed searching
- 5.0. explain the parts of an article (title, abstract, introduction, aim, hypothesis, methods, results, discussion, conclusions, references)
- 6.0. explain the parts of an abstract
- 7.0. describe how to read and present an article

#### **SKILLS**

- 1.0. use PubMed as academic search engine
- 2.0. apply critical reading of scientific article
- 3.0. present a scientific research article

### **ASSESSMENT PROCEDURE:**

For the assessments of the medical students for the SRP, it is calculated out of 100 points; 50% will be graded on Assignment 1 (ask a question, determine keywords and draw search construction (draw a chart) and search from Pubmed with boolean operators “and, or, not”) at the end of the first semester (**February 10, 2024**) and 50% will be graded on Assignment 2 (present a scientific research article) at the end of the second semester (**May 5, 2024**).

The constraints of the Assignments will be discussed in Small Group Study hours. During these sessions students can discuss related issues and ask questions.

The Scientific Research and Projects I has 3% contribution to Term Score (TS).

Please note that you may only attend Small Group Study hours in the assigned group hours. A list of groups will be published during the first week of the term.

## ASSESSMENT PROCEDURE

The Assessment Procedure of the Phase I covers exams and scores and their abbreviations that are shown below.

### 1.0. Exams:

#### Committee Exam (CE)

- Mid-term Exam (MTE)
- Final Exam (FE)
- Incomplete Exam (ICE)
- Make-up Exam (MUE)
- Progress Test (PT)

### 2.0. Scores\*:

- Committee Score (CS)
- Committees Mean Score (CMS)
- Introduction to Clinical Practice Score (ICPS)
- Anatomical Drawing Score (ADS)
- Common Compulsory Course Score (CCCSs)
- Elective Course Score (ECSs)
- Scientific Research and Project Score (SRPS)
- Final Exam Score (FES)
- Incomplete Exam Score (ICES)
- Term Score (TS)

\* All scores have a range of 0-100 points.

Assessment approaches, assessment methods and assessment tools, that related with the exam and score types, are shown below table.

Assessment Approaches	Assessment Methods	Question Types / Assessment Tools	Exams	Derived Scores
Knowledge-based Assessment	WE: Written Examination	MCQ: Multiple Choice Questions	CE, MTE, FE, ICE, PT	CS, ICPS, FES, ICES, ECSs, SRPS
		SbMCQ: Scenario-based MCQs	CE, MTE, FE, ICE, PT	CS, ICPS, FES, ICES
		EQ: Essay Questions	CE	CS
		FSAQ: Fill-in-the-Blank Short Answer Questions	MUE	CS

	LPE: Laboratory Practical Exam	LPE Checklist		CS

Performance-based Assessment	PWPE: Review Writing and Presenting Evaluation	PWPE Checklist		ECSs
	AID: Anatomical Images Drawing			ADS
	PBL-P: Evaluation of PBL Student's Performance	PBL Student Evaluation Form		CS

Exams Information (MED 104, MED 102)	
<b>CE</b>	For the proportional correspondence of individual learning objectives, please see the committee's assessment matrix table/page.
<b>MTE<sub>ICP</sub></b>	MTE <sub>ICP</sub> consists of MCQs to assess the theoretical part of the ICP program.
<b>FE</b>	FE consists of 200 MCQs. For the proportional contribution of each committee, please see the committee's question distribution table/page.
<b>ICE</b>	ICE consists of 200 MCQs. For the proportional contribution of each committee, please see the committee's question distribution table/page.
<b>MUE<sub>IBS</sub></b>	MUE will be held only twice in a term. MUE consists of FSAQs. The number of FSAQs is half of the relevant exam. MUE content will be developed by the coordination committees.

Scores Information (MED 104, MED 102, MED 103, HUM 103, TKL 201, TKL 202, HTR 301, HTR 302, Free Elective Courses)	
<b>CS</b>	The committee score is based on various question types/numbers and/or assessment tools (MCQ, SbMCQ or Checklists). Please see the committee's assessment matrix table/page for the specifications. Contribution of student's performance during PBL sessions to CSs of Committee II, III, IV and V is <b>5%</b> .
<b>CMS</b>	= Average of CSs
<b>ICPS</b>	= (40% MTE <sub>ICP</sub> ) + (60% Final OSCE)
<b>ADS</b>	= (70% AID <sub>AD</sub> ) + (30% FE <sub>AD</sub> )
<b>CCCSs</b>	= Score information will be announced by Course Coordinator.

<b>ECSs</b>	= Score information is shown pages of Elective Courses in the APB.
<b>SRPS</b>	= Score information is shown at the assessment page of Scientific Research and Projects
<b>FES</b>	= Final Exam Score
<b>ICES</b>	= Incomplete Exam Score
<b>TS</b> for students, <u>who are exempted from FE</u>	= 97% of CMS + 3% of SRPS
<b>TS</b> for students, <u>who are not exempted from FE</u>	= 97% of (60% of CMS + 40% of FES or ICES) + 3% of SRPS

### **Definitions of the Assessment Methods and Question Types**

**MCQ** consists of a question, followed by five plausible alternative responses from which the student has to select the correct one.

**SbMCQ** is a kind of multiple choice question. That they test knowledge in a far more applied, in depth, sense. SbMCQ is based on a clinical, research or daily life scenario.

**EQ** is a written examination that requires an answer in a sentence, paragraph, or short composition.

**FSAQ**, Fill-in-the-Blank Short Answer Questions are typically composed of a brief prompt that demands a written answer that varies in length from one or two words to a sentence.

**OE** is a practice in many schools of medicine and disciplines, where an examiner poses questions to the student in spoken form. The student has to answer the question in such a way as to demonstrate sufficient knowledge of the subject in order to pass the exam.

**OSCE** describes a form of competency-based assessment used to measure a student's clinical competence. During an OSCE, students are observed and evaluated as they go through a series of stations in which they perform professional skills on mannequins or interview, examine and treat simulated patients who present with some type of medical problem.

**OSPE** is used as an objective instrument for assessment of laboratory exercises in preclinical sciences. It was adapted from the objective structured clinical examination (OSCE). OSPE is implemented in similar conditions with OSCE.

**LPE** is included as it has been a traditional assessment format in many school of medicine – particularly in disciplines such as anatomy, physiology, pathology and biology. Various local terms are used to describe this Assessment method including 'Spot', 'Steeplechase', 'Timed stations' or 'Bellringer'.

### **Grades**

A letter grade is given to the students as a success grade, from the numerical values of the grades given by the relevant teaching staff for each course they take, taking into account the practice, laboratory and similar studies in the semester and examinations and academic activities.

Grades and Letter grades are shown for MED coded courses\* in the following table:

<b>Grades</b>	<b>Letter Grades</b>
90-100	AA
80-89	BA
70-79	BB
65-69	CB
60-64	CC
59 or less	FF (Fail in the context of "Pass or Fail Calculations of the Courses" table pp.41)
0	FA (Fail due to non attendance to the courses)

\* Please see <https://med.yeditepe.edu.tr/tr/mezuniyet-oncesi-tip-egitimi> for more information.

## **RULES FOR COURSE ATTENDANCE OF THE STUDENTS**

### **General Rules:**

Students are required to attend the all theoretical and practical sessions such as laboratory work, discussions, seminars, area and clinical studies of courses for the term they are enrolled in. Students whose absenteeism in the theoretical and/or practical sessions exceeds 20% are not admitted to term final and incomplete examinations of the courses.

### **Phase I, II, and III:**

#### **BMS I, BMS II, ICS course committees**

A student is required to attend a committee in full. A student who fails to fulfill the attendance requirements is not admitted to the committee examination, and is deemed to have failed that committee. The absenteeism of a student, whose absenteeism does not exceed 20% of a committee and who has a reason considered justified and valid, may be accepted. However, a student whose absenteeism in the theoretical and/or practical sessions in a committee exceeds 20% but whose excuse is accepted by the Board of Directors, is admitted to the make-up examination of the related committee if his/her absenteeism does not exceed 20% of the total number of the course hours covering/including all the committees throughout the term.

#### **ICP I,II,III courses**

A student whose absenteeism exceeds 20% of the theoretical and/or laboratory sessions in the program until the midterm exam date will not be admitted to the ICP Mid-Term exam (MCQ and/or OSCE). However, a student whose absence exceeds 20%, but whose excuse is accepted by the Board of Directors, is admitted to the make-up examination of the ICP Mid-Term exam, if his/her absenteeism does not exceed 20% of the total course hours during the term.

## EXAM RULES

- **Seating-** Students will be seated by the exam observers or proctors. Students are not allowed to change their seats without permission.
- **Electronics** – During examinations or tests, students are prohibited from using electronic devices or any other means of communication and recording that have not been approved beforehand. All electronic devices are prohibited. Anyone who fails to comply with these regulations may be charged with academic fraud.
- **Absence** – No additional time will be given to students who are absent for part of the exam, regardless of the reason for their absence.
- **Scratch Paper** – Students are not allowed to bring scratch paper into the exam room.
- **Meaning of Questions** – Students may not consult the supervisor as to the meaning of any question.
- **Signature** – Students must sign their multiple-choice answer sheets and/or written-answer sheets.
- **Other activities requiring disciplinary action-**
  - Students must not give or receive assistance of any kind during the exam.
  - Gaining access to exam questions before the exam.
  - Using an unauthorized calculator or other mechanical aid that is not permitted.
  - Looking in the exam book before the signal to begin is given.
  - Marking or otherwise writing on the exam book or answer sheet before the signal to begin is given.
  - Making any changes, additions, deletions or other marking, erasing or writing on the exam book or answer sheet after the time for the exam has expired.
  - Having access to or consulting notes or books during the exam.
  - Looking at or copying from another student's paper.
  - Enabling another student to copy from one's paper.
  - Talking or otherwise communicating with another student during the exam or during the read through period.
  - Disturbing other students during the exam.
  - Consulting other persons or resources outside the exam room during the exam.
  - Copying questions or answers either on paper or with an electronic device to take from the exam room.
  - Taking an exam book or other exam materials from the exam room.
  - Taking an exam in place of another student.
  - Arranging to have another person take an exam for the student.
  - Disobeying to the conduct of supervisor during the exam.
  - Disclosing the contents of an exam to any other person.
  - Failing to remain in the exam room for a given period of time by the supervisors.
  - Failing to follow other exam instructions.

Those students found to have committed academic misconduct will face administrative sanctions imposed by the administration of Yeditepe University Faculty of Medicine according to the disciplinary rules and regulations of the Turkish Higher Education Council (YÖK) for students (published in the Official Journal on August 18th, 2012). The standard administrative sanctions include, the creation of a disciplinary record which will be checked by graduate and professional life, result in grade “F” on the assignment, exams or tests or in the class. Students may face suspension and dismissal from the Yeditepe University **for up to one school year**. In addition, student may lose any academic and non academic scholarships given by the Yeditepe University **for up to four years**. The appropriate sanctions are determined by the Yeditepe University administration according to egregiousness of the Policy violation.

## **PROGRESS TEST**

Progress test (PT) is used to assess students on topics from all medical disciplines. As an assessment tool in medical education, the PT offers some distinctive characteristics that set it apart from other types of assessment. It is administered to all students in the medical program at the same time and at regular intervals (usually twice a year) throughout the entire academic program. The test samples the complete knowledge domain expected that a student to have on graduation, regardless of which grade the student is at. The scores provide beginning-to-end and curriculum-independent assessments of the objectives for the entire medical program. The purpose of the PT as a formative or summative test is variably used across institutions.

In YUTF, PT is applied according to the following principles and rules.

### **Purpose**

- In YUTF, PT is used for formative purposes.

### **Obligation**

- PT is mandatory for all students.

### **Frequency and Timing**

- PT is performed twice a year.
- Each student will have received a total of 10 PTs by the end of the Phase 5.
- In a year; the first PT is done in the middle and the second PT is done at the end of the term.
- PT dates are announced by the Phase Coordinator.

### **Implementation**

- PT is performed online via EYS.

### **Content**

- PT consists of 200 multiple choice questions.
- 100 of them are related to the preclinical period and the rest 100 are related to the clinical period.
- The ratio of the questions to be asked according to the disciplines is announced to the students before PT.
- All students from 1st to 5th Phase are to answer the same questions.

### **Feedback**

- A report is sent to each student after each PT.
- The report includes how many questions the student answered correctly in each discipline and their progress against the previous PT.

### **Benefits**

- PT gives students the opportunity to see their progress throughout their medical education.
- PT provides opportunities for students to prepare for other exams (Committee, Clerkship, TUS, USMLE, etc.).
- As questions are often enhanced with a real life problem, PT contributes to students' problem-solving skills. This question type is preferred in TUS, especially USMLE and other similar exams.

## A SHORT GUIDE for STUDENTS to PROBLEM-BASED LEARNING (PBL)

In Phase I besides the lectures, Problem Based Learning Sessions are implemented in the education program.

The principal idea behind PBL is that the starting point for learning should be a problem, a query, or a puzzle that the learner wishes to solve.

PBL is a learning method where students perceive their knowledge gaps, decide on learning issues and achieve these, while working in small groups on a case to solve a patient's problems.

So, PBL starts with a clinical case of a patient. While working on the patient's problems you will identify your learning needs and study these. During this whole process you will work with a group of 8-12 students and a tutor.

### How it works?

You will be presented with a patient case (scenario) that has some problems and will be asked to proceed according to the information and instructions that you will receive. You will not be informed about the topic of the case in advance but will face the problem when given to you in your first session- *just like a doctor does not know what patients he/she will see when starting the day.*

Scenarios will be given to you one page at a time. When you finish discussing a page you will be given the following page with additional information about the patient.

Each PBL case will be discussed over 3 sessions, 2 hours each. You will work in a group of 8-12 students with a tutor. One student elected by the group will work as the "scribe"(person who will write the discussed topics on the board). The scribe may change at every session, by group decision.

Each group will be given the same scenario but will work independently from each other.

The tutor working with you will NOT TEACH you but will only guide to on this exciting trip. He/she will ask you questions to guide you to the problems to be solved.

Your aim will be to find out the reasons, and in some cases, the solutions of the problems presented.

It is clear (and we know) that you do not have enough knowledge to understand and solve all the problems presented to you.

Here comes the aim of PBL: **you will thus recognize WHAT YOU DO NOT KNOW and WHAT YOU SHOULD LEARN.** In other words **you will identify your knowledge gaps and try to learn them.** These are called "learning objectives".

In order to facilitate and direct discussions and the learning process all relevant points should be written on the board by the scribe. The board should be used as below (with examples):

Problems	Hypotheses	Additional (Required) information	Learning issues (Learning objectives)
<i>Example</i>	<i>Example</i>	<i>Example</i>	<i>Example</i>
<i>Fever Cough Pallor</i>	<i>Throat infection Pneumonia Anemia</i>	<i>Throat examination Chest examination Chest X-ray Blood count</i>	<i>Causes of fever How is body temperature controlled? Anatomy of the throat Anatomy of lungs What is anemia?</i>

The patient's problems will be listed under the "Problems" column.

The possible causes/reasons/mechanisms of the patient's problems will be listed under "Hypotheses". You can suggest and write anything that comes to your mind- you will then try to find any facts or information that can support these hypotheses. Do not be shy to suggest anything. You will not be judged for those things that you suggest.

As you will not be provided with all information about the patient you will need more information (such as, the patient's fever, physical examination findings, laboratory data, etc.). You will thus ask the scribe to write down these on the board under "**Required Information**" heading. This means information that you want to learn about this particular patient.

During the course of these discussions you will recognize that you do not know and thus need to study and learn some topics/issues, which are called "**learning objectives**". The learning objectives will be written on the fourth column under this heading. These are the topics that you will study until the next session and present by then.

This will lead you to the second stage of PBL: learning the facts that **you** have decided to. You will have to **find and reach the required learning resources** (textbooks, journal articles, reliable internet sources, etc.) and **study** these in your **independent study time**. You will be given a list of possible learning resources for every discipline but you can find other sources in addition to them. However, make sure that these are reliable sources- especially web sources need cautiousness.

When you meet with your group and tutor in your second (and third) session, you will be asked to summarize the previous session, list the learning objectives and then present the knowledge that you had learned.

In this way every group member (students) will study and learn the objectives and these will be discussed during the session. There may be disagreements among students for some information reached. The group will discuss and come to a conclusion about it. The tutor will guide and moderate the group through this process- BUT WILL NOT TEACH. **The tutor will not be a resource person but a faculty member who will facilitate your search for correct knowledge. It is YOU who will reach and learn the required topics-** the topics that you have identified as your learning objectives or knowledge gaps.

**The ultimate aim of a PBL case is NOT to diagnose the patient but to learn the topics that you discover that you do not know.** Although the case is a clinical problem, at this stage of your studies, you will have to focus on basic sciences. In other words, you will need/want to learn basic science topics (anatomy, physiology, biochemistry, microbiology, etc.) related to the patient's problems. **So you will learn basic sciences starting from a clinical case and thus appreciate why and where basic sciences are necessary and relevant.**

Other benefits of PBL that you gain are to:

- learn "how to learn"
- develop lifelong learning skills
- improve your communications skills
- state and defend positions with evidence and sound argument
- become more flexible in processing information and meeting obligations
- practice skills that you will need after your education
- improve your information literacy

**Assessment:** Your participation and contributions to the sessions will be assessed by your tutor. This will NOT be an assessment of your knowledge but your participation in the sessions, taking part in discussions, suggesting hypotheses, contributions by making presentations, etc. The assessment form is given below. This will comprise 5 % of that committee score.

PBL <b>First Session</b> Flow
A. Introducing activity <i>(For the first session of the term)</i>
B. Determination of group rules <i>(For the first session of the term)</i> <i>(Group rules will be written on the Flipchart.)</i>
C. Introducing the PBL Student Assessment Form to students <i>(For the first session of the term)</i> <i>(This form will be filled in electronically via EYS by the tutors after the second session of the scenario.)</i>

1.1. Review of the Group Rules <i>(The group rules created in the first session of the term will be remembered.)</i>
1.2. Warmup game
1.3. Selecting the reader and writer <i>(The reader's task is to read the scenario step by step, together with the questions on the box, to the group.)</i> <i>(The writer's task is to write the answers to all the questions in the scenario, especially! hypotheses and learning objectives on the flipchart.)</i>
1.4. Reading the scenario step by step <i>(The tutors will distribute the student copies of the scenario that came out of the session envelope to the students.)</i> <i>(The next page will not be passed until the students have finished reading a page and answering the related questions.)</i>
1.5. Using Dorland's Medical Dictionary for unknown medical terms. <i>(Printed Dorland's Medical Dictionary will be in the PBL room.)</i> <i>(Also, Electronic Dorland's Medical Dictionary can be accessed as; Yeditepe University Website ☐ Academic Drop-Down Menu☐ Information Center Tab ☐ Electronic Library Drop-Down Menu ☐ Off-Campus Access Tab ☐ OBS user Login with username and password ☐ Finding Dorland's Medical Dictionary among resources)</i> <i>(Direct link ☐ <a href="https://login.lproxy.yeditepe.edu.tr/login">https://login.lproxy.yeditepe.edu.tr/login</a> )</i>
1.6. Discussion <i>(Writing the hypotheses on the Flipchart, bringing the prior knowledge into the learning environment, reviewing the hypotheses, etc.)</i>
1.7. The tutor asks questions that lead students to learning objectives during the discussion
1.8. Determination of learning objectives by students <i>(The learning objectives determined by the student group will be written on the Flipchart by the writer.)</i>
1.9. Feedback <i>(Each group member's thoughts on him/herself, the group, the scenario, the tutor, the PBL flow, the environment, etc.)</i>
1.10. Attendance <i>(Students will sign the student list on the session envelope.)</i>
<b>PBL Second Session Flow</b>
2.1. Warmup game
2.2. Discussion of the learning objectives obtained in the previous session <i>(Reading the learning objectives on the Flipchart they were written in the previous session ☐ putting the objectives in order for discussion ☐ in-depth discussion of all objectives by the student group.)</i>

<p><b><i>(Important note: The second session of the scenario will not proceed until the following requirements are met. For each learning objective; it should be discussed in depth, the students' work should be shared, these discussions should be supported by the flowcharts drawn on the flipchart, the discussion of the learning objectives should not be superficial.)</i></b></p>
<p>2.3. Selecting the reader  <b><i>(The reader's task is to read the scenario step by step, together with the questions on the box, to the group.)</i></b></p>
<p>2.4. Reading the scenario of the second session  <b><i>(The tutors will distribute the student copies of the scenario from the session envelope to the students.)</i></b></p>
<p>2.5. Discussing the psychosocial dimension of the scenario</p>
<p>2.6. Feedback  <b><i>(Each group member's thoughts on him/herself, the group, the scenario, the tutor, the PBL flow, the environment, etc.)</i></b></p>
<p>2.7. Attendance  <b><i>(Students will sign the student list on the session envelope.)</i></b></p>
<p>2.8. After the session, the Tutor Evaluation Form is filled by the students on the EYS.</p>

## **AIM and LEARNING OBJECTIVES of ANATOMICAL DRAWING (MED 103)**

### **AIM**

- 1.0. to convey basic knowledge on anatomical drawing rules and drawing technique.
- 2.0. to equip with skills of three dimensional interpretation of bones and muscles in the human body.
- 3.0. to equip with skills of drawing bones and muscles in the human body.
- 4.0. to equip them with skills of visually explaining clinical conditions to patients.

### **LEARNING OBJECTIVES**

At the end of this course, student should be able to:

#### **KNOWLEDGE**

- 1.0. list rules associated with anatomical drawing.
- 2.0. represent a real axonometrical view under  $120^{\circ}$  angle based on frontal, horizontal and profile views of the human body.

#### **SKILLS**

- 1.0. draw frontal, horizontal and profile views of muscles in the human body.
- 2.0. draw frontal, horizontal and profile views of bones in the human body.
- 3.0. draw visually clinical conditions to patients.

#### **ASSESSMENT PROCEDURE:**

For the assessments of the medical students for the anatomical drawing class, it is calculated out of 100 points; 70 points of which comes from the 10 different drawing home works (each has equal value) and 30 points comes from the theoretical exams.

## AIM OF FREE ELECTIVE COURSES

Free elective courses aim to add complementary educational experiences to the medical school curriculum in order to improve comprehension of biopsychosocial approach of medical students, besides offering an opportunity to extend knowledge of interest in specific domains.

The following courses (2 ECTS credits each) will be offered in Spring semester. Each student has to choose one of these elective courses. The selection and enrollment procedure will be announced by the phase coordinator.

### List of Free Elective Courses

## **SPECIFIC SESSIONS / PANELS**

### **Introductory Session**

#### **Aim of the session:**

The session provides basic information about Yeditepe University Faculty of Medicine Undergraduate Medical Education Program (YUFM/UG-ME) and the educational phase relevant to the students. This session orients the students to the program and the phase.

#### **Objectives of the Session:**

1. To provide basic information about the YUFM/UG-ME.
2. To provide basic information about the phase.
3. To provide essential information on social programs and facilities.

#### **Rules of the Session:**

1. The session will be held in two types, conducted by Phase Coordinator and Committee Coordinator, respectively.
2. The first type will be held once in the first week of the educational phase. The second type will be held at the beginning of each committee.
3. Students should attend the session.

#### **Implementation of the Session:**

In the first type, Phase Coordinator will present brief information on the following topics:

- Organizational Chart of Yeditepe Medical Faculty Undergraduate Program in Medicine (YUFM/UG-ME), Work Descriptions and Introduction of Committees/Members,
- Directives on YUFM/UG-ME,
- YMF-GPM Program Outcomes
- Learning Objectives of the Phase
- Academic Program of the Phase
- Teaching and Learning Methods
- Learning Environments and Sources/ Resources
- Attendance
- Elective Courses (only in Phase I, II and III)
- Assessment Procedure
- Grade Point Average, Cumulative Grade Point Average (GPA, cGPA) Calculation
- Pass/Fail Conditions
- Feedback of the Previous Year and Program Improvements
- Social Programs and Facilities

In the second type, Committee Coordinator will present brief information on the following topics:

- Learning Objectives of the Committee
- Academic Program of the Committee
- Teaching and Learning Methods
- Learning Environments and Sources/Resources, References
- Attendance
- Assessment Methods and Question Distribution Table
- Committee Score Calculation Method
- Pass/Fail Conditions
- Feedback of the Previous Year and Program Improvements
- Social Programs and Facilities

## **COMMITTEE EVALUATION SESSION**

### **Aim of the Session:**

The aim of the session is to evaluate the committee educational program, with all its components, by the students and the committee coordinators. This session will contribute to the improvement of the educational program in general by giving the opportunity to identify the strengths of the committee educational program and revealing the areas which need improvement.

### **Objectives of the Program Evaluation Session** are to;

- establish a platform for oral feedbacks in addition to the systematically written feedback forms
- give the opportunity to the students and the coordinators to discuss the committee period face to face
- allow the students to review the committee exam questions together with faculty members.

### **Process:**

The total duration of the session is 60 minutes and the session consists of two parts. The first part (30 minutes) is dedicated to oral feedback by the students. All of the oral feedback will be recorded and reported by the committee coordination team. In the second part (30 minutes) committee exam questions will be reviewed and discussed by students and faculty.

### **Rules of the Committee Evaluation Session :**

1. The **Committee Evaluation Session** will be held on the last day of each committee after the committee exam.
2. Students are required to attend the session.
3. The Committee coordinator will lead the session.
4. The faculty members who had contributed questions in the committee exam should attend the session.
5. Students must comply with the feedback rules while giving verbal feedback and all participants shall abide by rules of professional ethics.

## **PROGRAM IMPROVEMENT SESSION**

### **Aim:**

The aim of this session is sharing the program improvements based on the evaluation of the educational program data, with the students and the faculty members.

### **Objectives:**

1. To share the improvements within the educational program with the students and the faculty members.
2. To inform the students and the faculty members about the processes of the program improvement
3. To encourage student participation in the program improvement processes.

### **Rules:**

1. Program improvement session will be implemented once a year. The implementation will be performed at the beginning of the spring semester.
2. Students are required to attend the session.
3. The phase coordinator will monitor the session. If necessary the dean, vice deans and heads of the educational boards will attend to the session.
4. All faculty members will be invited to the session.

### **Implementation:**

#### **Before the Session**

1. Phase coordinator will report the results of the improvements of the educational program.
2. The program improvements report has three parts. The first part of the report includes improvements that have been completed, and those that are currently in progress. The second part of the report includes, improvements that are planned in medium term, and the third part of the report includes, improvements that are planned in the long term.
3. The program improvements report also includes the program evaluation data (student feedbacks, faculty feedbacks, results of the educational boards meetings etc.) in use of improvements.

#### **During the Session**

4. The phase coordinator will present the program improvements report to the students and the faculty members.
5. Students can ask questions about, and discuss, the results of the program improvement.

**Process:** The total period of session is 30 minutes and has two parts. The first part (15 minutes) covers, presenting of the program improvement report. The second part (15 minutes) covers, students' questions and discussion.

#### **After the Session**

6. The program improvement brief will be published on the website of Yeditepe University Faculty of Medicine (<http://med.yeditepe.edu.tr>).

## INDEPENDENT LEARNING

### Description:

"Independent learning" is a process, a method and a philosophy of education in which a student acquires knowledge by his or her own efforts and develops the ability for inquiry and critical evaluation. It includes freedom of choice in determining one's learning objectives, within the limits of a given project or program and with the aid of a faculty adviser. It requires freedom of process to carry out the objectives, and it places increased educational responsibility on the student for the achievement of objectives and for the value of the goals (1).

### Aim:

The aim of this instructional strategy is to develop the students' ability to learn individually, so they are prepared for the classroom lessons, lectures, laboratory experiences and clinical practices, exams, professional life and have the abilities needed for lifelong learning.

### Objectives:

*With this instructional strategy, students will develop;*

- the skills that will help them to learn independently.
- self-discipline in their work habits.
- their evidence based research skills by using reliable resources.
- their teamwork skills by studying together.
- their clinical skills as self-directed working in the clinical skills laboratory.

### Rules:

1. All of the students will define independent learning process according to the algorithm below.
2. All of the students will be required to fill out a form, which is a self-assessment form for independent learning (methodology: timing, sources, strategy, etc.).
3. The students' academic performance and independent learning methodology will be analyzed comparatively, and feed-back on further improvements will be provided.

### What a student should do for learning independently?

1. **Analyzing:** First you will need to analyze carefully, what your problems and weaknesses are. For example, if you are studying anatomy, is your weak area broadly upper limb, lower limb, or what?
2. **Addressing:** Once you've decided your specific problems, you can list them. Which one needs to be addressed urgently? Work out your priorities. Whatever your subject area is, don't be afraid to return to the basics if necessary. It may give you more confidence in the long run to ensure you have a proper understanding of basic concepts and techniques.
3. **Accessing:** If you need reliable information, or if you need to read about a subject and put it into context, a textbook may be the best place to start. However, the Internet may be helpful if you need very up-to-date information, specific facts, or an image or video etc. If you need an academic research article, reports or case studies for your topic, then a database (Pubmed etc.) would be the best option.
4. **Timing:** In the weekly syllabus you will see, a specific time called "independent learning hour" for your independent work. In addition to these hours, the students should also have their own time schedule for their study time at home.
5. **Planning:** Your next step will be to work out a realistic study-plan for your work. What goals could you literally set for yourself? Don't make them too ambitious but set minor goals or targets that you know you will be able to achieve without having to spend a very long time working on them. How many hours will you need to achieve them? How will you know when you've achieved them?
6. **Recording:** When you work independently, it's a good idea to keep a written record of the work you've done. This can help with further planning and also give a sense of achievement as well as provide something to include in a progress file. As time goes by you may surprise yourself with what you've been able to achieve. This could motivate you to keep going, as could increase your confidence, and even improve your results
7. **Reflecting:** Reflecting on what you've done can help you decide whether the activity was really effective, whether an alternative approach might be better on another occasion, whether you spent the right amount of time and whether you have achieved the target you'd set yourself.

8. **Improving:** Once you've achieved the target, the process of planning can start again. Your needs and priorities may have changed, so think about them and then set yourself to another target.

**Reminder:** For further information about independent learning, please contact the Department of Medical Education.

## COMMITTEE I – INTRODUCTION TO BASIC MEDICAL SCIENCES

### AIM and LEARNING OBJECTIVES

#### AIM

1. **to convey** basic term and concepts on medical history, anatomy, physiology, embryology, histology, medical biology, biophysics, organic chemistry.
2. **to convey** basic knowledge on viability.
3. **to convey** knowledge on cellular structure and functions.

#### LEARNING OBJECTIVES

At the end of this committee, student should be able to;

#### KNOWLEDGE

- 1.0. define fundamental concepts of anatomy
- 2.0. define anatomical properties and clinical implications for bones of the upper and lower limbs.
- 3.0. explain basic terms and concepts related to basic physics, basic biophysics, international units, biomechanics, bio-optics, bioelectronics.
- 4.0. explain mechanic, electrical and optical processes that are characteristics of living organisms
- 5.0. define basic histological terminology and describe the main types of microscopes and their uses.
- 6.0. explain the histological methods.
- 7.0. explain describe the molecular components of cell
- 8.0. define the concepts of medicine, disease and health in the evolutionary perspective.
- 9.0. explain disease and health theories in prehistoric era
- 10.0. define structure of atom and chemical bonds.
- 11.0. for organic compounds
  - 11.1. define functional groups
  - 11.2. classify possible reactions
- 12.0. define homeostasis
- 13.0. define the basic concepts of medical law rights of the patient and physician, concept of medical intervention

#### SKILLS

- 1.0. apply basic laboratory techniques and use equipments
- 2.0. display (demonstrate) scientific reasoning, information literacy and skills of self-directed, life-long learning

#### ATTITUDES

- 1.0. value teamwork, interpersonal skills, and significance of psychosocial issues

**COMMITTEE II – CELL**  
**AIM and LEARNING OBJECTIVES**

**AIM**

- 1.0 **to convey** basic term and concepts on medical history, anatomy, physiology, embryology, histology, medical biology, biophysics, organic chemistry and microbiology.
- 2.0 **to convey** knowledge on cellular structure and functions.
- 3.0 **to convey** knowledge on process from zygote to formation of organs.
- 4.0 **to convey** knowledge on system-specific (bones, skull, vertebra, and thorax) anatomy and its clinical applications.

**LEARNING OBJECTIVES**

At the end of this committee, student should be able to;

**KNOWLEDGE**

- 1.0. define anatomical properties and clinical implications for the axial skeleton
- 2.0. explain basic terms and concepts about radiation biophysics, radiation safety and use of lasers.
- 3.0. list effects of radiation to the organism, its evaluation methods on the cellular basis and protection approaches.
- 4.0. define the histological characteristics of cell membrane and functions
- 5.0. define the cellular organelles and their functions
- 6.0. explain the cytoskeleton components and their functions
- 7.0. explain the histological characteristics of the cell nucleus
- 8.0. define the basic terms of embryology and list the difference between mitosis and meiosis
- 9.0. list the difference between male and female gametogenesis
- 10.0. explain the developmental events respectively from zygote to gastrulation
- 11.0. define cell membrane structures and explain membrane transport mechanisms
- 12.0. for distribution of substances in body fluids;
  - 12.1. define intra and extracellular fluid compartments
  - 12.2. explain the distribution and functions of electrolytes such as Na, K and Ca in body fluids
  - 12.3. define edema
- 13.0. define the term osmosis and explain the conditions required for osmosis to occur and explain the dynamics of osmotic pressure.
- 14.0. for transport of substances through the cell membrane;
  - 14.1. define diffusion and explain the factors that influence the rate of diffusion through cell membranes.
  - 14.2. define the characteristics of carrier-mediated transport.
  - 14.3. explain active transport mechanisms and describe how the Na<sup>+</sup>/K<sup>+</sup> pump works
- 15.0. define molecular architecture of cell.
- 16.0. define human genome structure.
- 17.0. explain the roles of DNA and RNA in the maintenance of living organism.
- 18.0. describe main concepts of DNA replication, translation and protein synthesis.
- 19.0. define control mechanisms of gene regulation.
- 20.0. define molecular mechanism of cell division and cell cycle.
- 21.0. define the correlation of medicine, art and philosophy from prehistoric ages to date.
- 22.0. for microorganisms;
  - 22.1. classify
  - 22.2. list general characteristics.
- 23.0. define structure of organic compounds and their chemical reactions
- 24.0. define structures and reactions of macromolecules such as amino acid, protein, lipid and carbohydrate.
- 25.0. explain case scenario related basic medical science topics in a clinical context.
- 26.0. define the rights of the patient and physician, particularly the right to self determination and informed consent, protection of patients' personal data

**SKILLS**

- 1.0. apply basic laboratory techniques and use equipments
- 2.0. display (demonstrate) scientific reasoning, information literacy and skills of self-directed, life-long learning

**ATTITUDES**

- 1.0. value teamwork, interpersonal skills, and significance of psychosocial issues

## **COMMITTEE III –TISSUE I**

### **AIM AND LEARNING OBJECTIVES**

#### **AIM**

1. **to convey** basic terms and concepts for anatomy, physiology, embryology, histology, immunology, biophysics, behavioral sciences, and medical ethics.
2. **to convey** knowledge on four fundamental tissues forming the body, cells forming these tissues.
3. **to convey** knowledge on excitation and contraction mechanisms of muscles.
4. **to convey** knowledge on system-specific (pelvis, joints of vertebrae, bones and joints of lower and upper extremities) anatomy and its clinical applications.

#### **LEARNING OBJECTIVES**

At the end of this committee, student should be able to;

##### **KNOWLEDGE**

- 1.0. explain anatomical characteristics of joints in general.
- 2.0. define anatomical properties and clinical implications for the joints of extremities..
- 3.0. explain anatomical characteristics of muscles and spinal nerves in general
- 4.0. describe anatomical properties and clinical implications for back muscles.
- 5.0. explain muscle contraction mechanism on the basis of Sliding Filament Theory.
- 6.0. define biophysical membrane model
- 7.0. explain steady state and equilibrium state for the cell
- 8.0. explain the link between structure and role of tissues.
- 9.0. for epithel tissue;
  - 9.1. describe the primary functions and characteristics of epithelial tissue
  - 9.2. distinguish different types of epithelium and cell to cell junctions
  - 9.3. define the types and functions of glandular epithelium
- 10.0. for muscle tissue;
  - 10.1. describe histological characteristics and relate main function
  - 10.2. summarize the main similarities and differences between three different types of muscle
  - 10.3. describe the embryology of muscular system
- 11.0. for connective tissue;
  - 11.1. explain the general specification
  - 11.2. identify the classification and specific properties of connective tissue types.
- 12.0. explain the morphological properties and functions of blood cells
- 13.0. define the correlation between ethics and philosophy in relation with main ethical theories.
- 14.0. for membrane potentials and action potentials
  - 14.1. explain how resting membrane potential is produced
  - 14.2. define depolarization, repolarization, and hyperpolarization and properties of action potentials.
- 15.0. describe the gross and microscopic structure of skeletal muscles and motor unit.
- 16.0. For contraction of skeletal muscle
  - 16.1. explain the role of Ach in the neuromuscular transmission
  - 16.2. explain what is meant by the sliding filament theory of contraction
  - 16.3. define the role of Ca<sup>2+</sup> and the sarcoplasmic reticulum in excitation-contraction coupling
- 17.0. define the basics of immune response
- 18.0. explain case scenario related basic medical science topics in a clinical context.
- 19.0. define molecular mechanism of signal transduction, cell death and cancer
- 20.0. define chromosome structure and abnormalities
- 21.0. explain tools in medical biology and their use in medical clinics
- 22.0. define defensive medical practices, complications, malpractice, its legal consequences and liability

##### **SKILLS:**

- 1.0 apply basic laboratory techniques and use equipment.
- 2.0 use biopsychosocial approach on medical practice.
- 3.0 display (demonstrate) scientific reasoning, information literacy and skills of self-directed, life-long learning.
- 4.0 present and write a scientific article

##### **ATTITUDES**

- 1.0. value teamwork, interpersonal skills, and significance of psychosocial issues

## **COMMITTEE IV – TISSUE II**

### **AIM AND LEARNING OBJECTIVES**

#### **AIM**

1. **to convey** basic terms and concepts for anatomy, embryology, histology, immunology, biostatistics, biophysics, biochemistry, behavioral sciences, and medical biology.
2. **to convey** knowledge on four fundamental tissues forming the body, cells forming these tissues and the intercellular material.
3. **to convey** knowledge on system-specific (upper extremities, back and chest area muscles, vascular and nervous innervations) anatomy and its clinical applications.
4. **to convey** knowledge on basic metabolic pathways of the body.

#### **LEARNING OBJECTIVES**

##### **KNOWLEDGE**

At the end of this committee, student should be able to;

- 1.0. describe anatomical properties of the upper extremity and axial muscles.
- 2.0. describe the clinical implications of the anatomical features of the upper extremity and axial muscles.
- 3.0. describe the Milestones of development (Pregnancy through old age), Piaget's cognitive development theory, approaches on personality development: Psychoanalytic-Theory and Defense mechanisms, Humanistic Theories
- 4.0. describe the biology of behavior including genetic influences, behavioral neuroanatomy and neurotransmission; substance related disorders
- 5.0. define consciousness, stages of sleep and sleep-related disorders, and neurophysiology of perception
- 6.0. explain forms of learning (sensitization/habituation, sensory and motor learning, classical and operant conditioning, reinforcement, extinction, social-cognitive learning, observational learning) and neural bases of memory formation
- 7.0. for biomolecules;
  - 7.1. define structural and biochemical functions of carbohydrates, lipids, proteins and nucleotides
- 8.0. for enzymes;
  - 8.1. list basic properties and classes of enzymes,
  - 8.2. describe regulatory functions of enzymes,
  - 8.3. define the functions of enzymes in different metabolic pathways
- 9.0. describe the ATP production by substrate level phosphorylation and oxidative phosphorylation
- 10.0. for biophysics,
  - 10.1. explain basic physical properties of biomaterials (such as bone and vessels)
  - 10.2. know basic properties of digital biomedical signals
- 11.0 for main concepts of biostatistics
  - 11.1. explain the main concepts of statistic
  - 11.2. list the names of the data types
  - 11.3 list the types of the graphics
  - 11.4. describe a frequency distribution
- 12.0 list the types of descriptive statistics for cartilage and bone tissue;
- 13.0. For cartilage, bone and adipose tissue;
  - 13.1. explain general microscopic characteristics
  - 13.2. summarize the main similarities and differences between different types of cartilage
  - 13.3. explain histological characteristics of the bone cells
  - 13.4. describe the main similarities and differences between different types of bone
  - 13.5. explain steps of the ossification types
  - 13.6. explain the developmental stages of bone formation
- 14.0. For nervous tissue;

- 14.1. define the general histological structure of nervous tissue
- 14.2. define the structure and function of neuronal and glial cells.
- 15.0 for medical biology,
  - 15.1 define basic concepts of inherited diseases
  - 15.2 explain the epigenetics, nutrigenomics and pharmacogenetics
  - 15.3 explain fundamental concepts of stem cell and gene therapy
  - 15.4 define the biological aspects of development
- 16.0 define the basics of immune response
- 17.0 explain case scenario related basic medical science topics in a clinical context.

## **SKILLS**

- 1.0 apply basic laboratory techniques and use equipments.
- 2.0 for biostatistics,
  - 2.1 apply descriptive statistics for a given data set.
  - 2.2. demonstrate a given data set using graphics.
- 3.0 use biopsychosocial approach on medical practice.
  - 3.1. display (demonstrate) scientific reasoning, information literacy and skills of self-directed, life-long learning.
  - 3.2. present and write a scientific article

## **ATTITUDES**

- 1.0. value teamwork, interpersonal skills, and significance of psychosocial issues

## **COMMITTEE V - ENERGY AND METABOLISM**

### **AIMS AND LEARNING OBJECTIVES**

#### **AIM**

- 1.0 **to convey** basic terms and concepts of medical biology, biostatistics, embryology, histology, immunology, biochemistry, behavioral sciences, and medical biology.
- 2.0 **to convey** knowledge on basic energy mechanisms of the body.
- 3.0 **to convey** knowledge on the process from zygote to formation of organs.
- 4.0 **to convey** knowledge on system-specific (lower extremities, muscles, vascular and nervous innervations) anatomy and its clinical applications.

#### **LEARNING OBJECTIVES**

At the end of this committee, student should be able to;

#### **KNOWLEDGE**

- 1.0. describe anatomical properties of the lower extremity muscles.
- 2.0. describe the clinical implications of the anatomical features of the lower extremity muscles..
- 3.0. understand the physiological bases of emotions and related behavior, human sexuality and the influences of culture in illness;
- 4.0. define abnormality; compare and contrast psychological disorders on the DSM system; determination of violence and abuse; legal and ethical issues in medicine and appropriate physician-patient relationship.
- 5.0. explain ATP synthesis in the human organism and enzymatic system that this synthesis occurs by.
- 6.0. list enzymes involved in blood clotting and their functions.
- 7.0. explain glycogen and glucose metabolisms.
- 8.0. for transport mechanisms in biological membranes;
  - 8.1. the permeability of biological membranes
  - 8.2. explain its correlation with ATP usage.
- 9.0. for probability
  - 9.1. describe the term of probability
  - 9.2. explain the rules of the probability
  - 9.3. list the probability distributions
- 10.0 for diagnosing tests
  - 10.1. list the names of the measurements that used to evaluate the accuracy of a diagnostic test. ,
  - 10.2 to explain the meanings of the values of these measurements.
- 11.0 for epidemiology,
  - 11.1. to explain the meaning of epidemiology,
  - 11.2. list the names of epidemiological studies.
  - 11.3. list the risk measurements that are used in epidemiological studies.
- 12.0 list developmental events respectively from somitogenesis to neurulation
- 13.0 Describe the process of foldings, angiogenesis and list developmental events respectively from organogenesis to parturition
- 14.0 explain developmental link between embryonic layers and tissues that form organs.
- 15.0 explain infertility, contraception and assisted reproductive techniques
- 16.0 explain the development of congenital anomalies
- 17.0 define the features of the mitochondrial genome
- 18.0 define the basics of immune response

19.0 explain case scenario related basic medical science topics in a clinical context.

### **SKILLS**

- 1.0 apply basic laboratory techniques and use of equipment.
- 2.0 for biostatistics,
  - 2.1. apply probability techniques for a given problem
  - 2.2. apply the measurements to evaluate the accuracy of a diagnostic test.
  - 2.3 apply risk measurements to evaluate the risk of the exposure in a given study.
- 3.0 use biopsychosocial approach on medical practice.
- 4.0. display (demonstrate) scientific reasoning, information literacy and skills of self-directed, life-long learning.
- 5.0. present and write a scientific article

### **ATTITUDES**

- 1.0. value teamwork, interpersonal skills, and significance of psychosocial issues.

<b>TOTAL</b>			<b>100</b>			

Total number of MCQs are 100 (each question has equal value)

Total value of LPE is equal to 100 points

**CS = 95% of [ 90% CE (MCQ+EQ) + 10% (LPE)] + 5% of PBL-P**

<sup>#</sup>In FE and ICE, 34 out of 200 MCQs will be from this Committee (Each question has equal value).

#### Abbreviations:

**MCQ:** Multiple Choice Question, **SbMCQ:** Multiple Choice Questions which are based on a clinical, research or daily life scenario, **EQ:** Essay Questions \* Biostatistics exam will be given separately before the committee exam date.

**LPE:** Practical Lecture Evaluation, **CE:** Committee Exam, **CS:** Committee Score, **FE:** Final Exam, **ICE:** Incomplete Exam, **PBL-P:** Evaluation of PBL Student's Performance

## STUDENT COUNSELING

Student counseling is a structured development process established between the student and the consultant that aims to maximize student success by focusing the student to her/his target. Although the major component of this relationship is the student, the faculties also take part by bringing the requirements of this interaction to their systems. The targeted outcomes of the consultant-student interaction are success in the exams, success in the program, and preparation for the professional life.

The aim of counseling is to help students to solve their problems, to give professional guidance, to provide coaching, to contribute to adopting the habit of lifelong learning, to provide information about the University and Faculty, to follow their success and failure and to help them select courses.

The consultants selected among Basic Medical Sciences instructors for the first three years transfer the students to Clinical Sciences instructors for the following three years.

***The topics that will be addressed by the consultants are as follows:***

- a) Inform students about the university, faculty and surrounding facilities
- b) Inform students about the courses and help them select courses
- c) Inform students about the education and assessment regulations
- d) Follow students attendance to lectures and success
- e) In case of failure, investigate the causes and cooperate with the students to overcome them
- f) Help students in career planning
- g) Contribute to students adapting the habit of lifelong learning
- h) Guide students to counseling services of the university
- i) Set a role model as long as the professional susceptibility, professional guidance, intellectual responsibility, interaction with peers, ethics, professional values are concerned
- j) Contribute to cultivation of professional and intellectual development in a rapidly changing world
- k) Inform the coordinator when there are unsolved problems of the students
- l) Consultant-student relationship is a dynamic and mutual process carried out within the campus and the hospital. It is recommended that the consultant and the student meet at least twice during a semester.

***The expectations from the student are as follows:***

- a) Contribute to improvement of satisfaction level in the problem areas
  - b) Report the social and economic conditions that require consultant's help
  - c) Specify expectations from the education and the department from which this training is taken
  - d) Give feedback on the counseling services regarding their satisfaction level
- Student counsellors will be appointed after finalization of the class list and will be announced to the students.

After the announcement of the counsellors on the information board, each student is expected to contact his/her counsellor until the end of the current committee.

## **PEER ADVISING PROGRAM**

In addition to the Student Counseling program which lasts throughout the six years in the Faculty of Medicine, the Office of Individual and Academic Development under the Dean of Students of Yeditepe University runs a peer advising program for the first-year medical students in cooperation with the Faculty of Medicine.

The aim of the peer advising program is to facilitate the adaptation process of new undergraduate students (first year or freshmen) to the University environment.

Within the scope of the program, each student is assigned a peer advisor who is from upper classes of the same major/ faculty as the freshman. The duration of the peer advising is one academic year during which, peer advisors help students assigned to them for basic questions related to their university education.

Peer advisors gain leadership skills (such as team building, time management, problem-solving, mentoring) that will benefit them in their future professional life/ career while helping first year/ new-comer students by their adaptation process to the university academic life.
