- The curriculum applies to 2014-2015 educational term. The duration of educational term for each year is shown in the table as total number of weeks.
- Yeditepe University credits (Y) are calculated with the following method (with the exception of common courses\*):  $Y = (\text{Total workload of the course per average student during the educational term} / \text{Total number of weeks in the educational term})$ . Workload unit is derived solely from contact hours of learning activities; both for the theoretical and practical learning activities 1 contact hour corresponds to 1 workload unit.
- \*The common courses are obligatory in all programs of the university. The university credit values of the common courses are as stated by the University Senate. Yeditepe University credits (Y) of the common courses are calculated with the following method:  $Y = (\text{Total workload of the course per average student during the educational term} / \text{Total number of weeks in the course period})$ . NC: Non-Credit, FS: Fall Semester, SS: Spring Semester, W: Weeks.
- 1 ECTS=30 hours of workload including independent study hours per average student. GPA and cGPA calculations are based on ECTS credits.
